FleetWare SMR

(Service Maintenance and Repair)

FleetWare SMR (Service Maintenance and Repair Module) provides a detailed breakdown of maintenance information for service, maintenance and repair costs including tyres and MOT, for cars and LCV's, all in a Windows environment sitting on an Access Database. The system is robust, simple to operate and comes with full help files, can be on a stand alone basis or networked

FleetWare SMR's intuitive functionality enables the user to determine all Service Maintenance & Repair budgets, including tyres and MOT, with a full breakdown of the elements of the total cost base.

When a vehicle is selected the full costs can be viewed, split by yearly spend, whilst further drill-down options show the precise make up of each element of the suggested budget. The system can display side-by-side comparisons of budgets for any vehicle in the database, or can compare the same vehicle on differing terms and mileages.

Any term or mileage up to five years/200,000 miles can be selected.

Pie chart, bar and spend graph screens give a visual representation of the total cost base, whilst a warranty and service screen lists the warranties applicable to the selected vehicle and the complete list of servicing costs.

All parts costs are based on retail pricing, and the parts, service and labour time data is sourced directly from each manufacturer.

A number of standard reports are included within the system, with the ability to export the data into spreadsheet or text formats if required. For DUSQ users the data may also be exported directly into the maintenance override grids.

Various parameter options are available depending on the levels of feature subscribed to which allow the budgets to be modified to suit individual requirements. Labour rates, wear rates, parts discount, inflation, contingency, tyre costs and sizes can all be amended at database, manufacturer, model or vehicle level. A parameter report option allows the user to monitor any or all of the adjustments made to the base data.

Data updates are issued weekly in a CD format.

Version 3 (the latest release) of SMR incorporates the following enhancements:

Improved system parameter control

Inflation, contingency, labour rates, parts and tyre discounts are all available at Database, Manufacturer, Model and Vehicle level

Greater control over parts usage

Ability to apply user-defined parts replacement cycles
Elect to have parts calculation based on whole units only

New tyre management functions

Override tyre costs and replacement cycles
Create user-defined tyres
Assign differing tyres to vehicles

Additional service information

Drill down of service costs includes details of 'sundries' (cambelt, brake fluid etc.)

Extended exporting options

Export budgets for any term up to 60 months
Export budgets expressed as monthly value
Export month by month build up of costs

Enhanced reporting options

Vehicle parameter report - displays user changes to system
Vehicle override report - displays all user overrides to replacement cycles
Tyre override report - displays all user overrides
New comparison report

All reports are available in either Quick Report or Crystal Report format.

Security controls

All system parameters and overrides are now password protected for greater security

FleetWare SMR

INTERNATIONAL
DECISION SYSTEMS

European option

Currency conversion

Manage exchange rates

Mileage/Kilometre conversion

Allocate winter tyres and define usage (and storage)

The system is robust, simple to operate and comes with its own full help files.
